strengths in some respects and weaknesses in others may be noted.

Considering the extent to which contacts with schools have been, or are, common to the population of Canada, then, logically, the many organizations and persons associated with education should legitimately concern themselves with continuing to promote attention now, and in the future, to maintaining, and indeed extending, the emphasis given to the heritage aspects of elementary and secondary education. As the significance of the preservation and presentation of our past is recognized, the importance of elementary and secondary education, past and present, warrants consideration. Archives and museums should be mindful of what has been already achieved and of what may be the appropriate and rightful extension of their efforts. □
